

Rangehood Venting - Layflat System

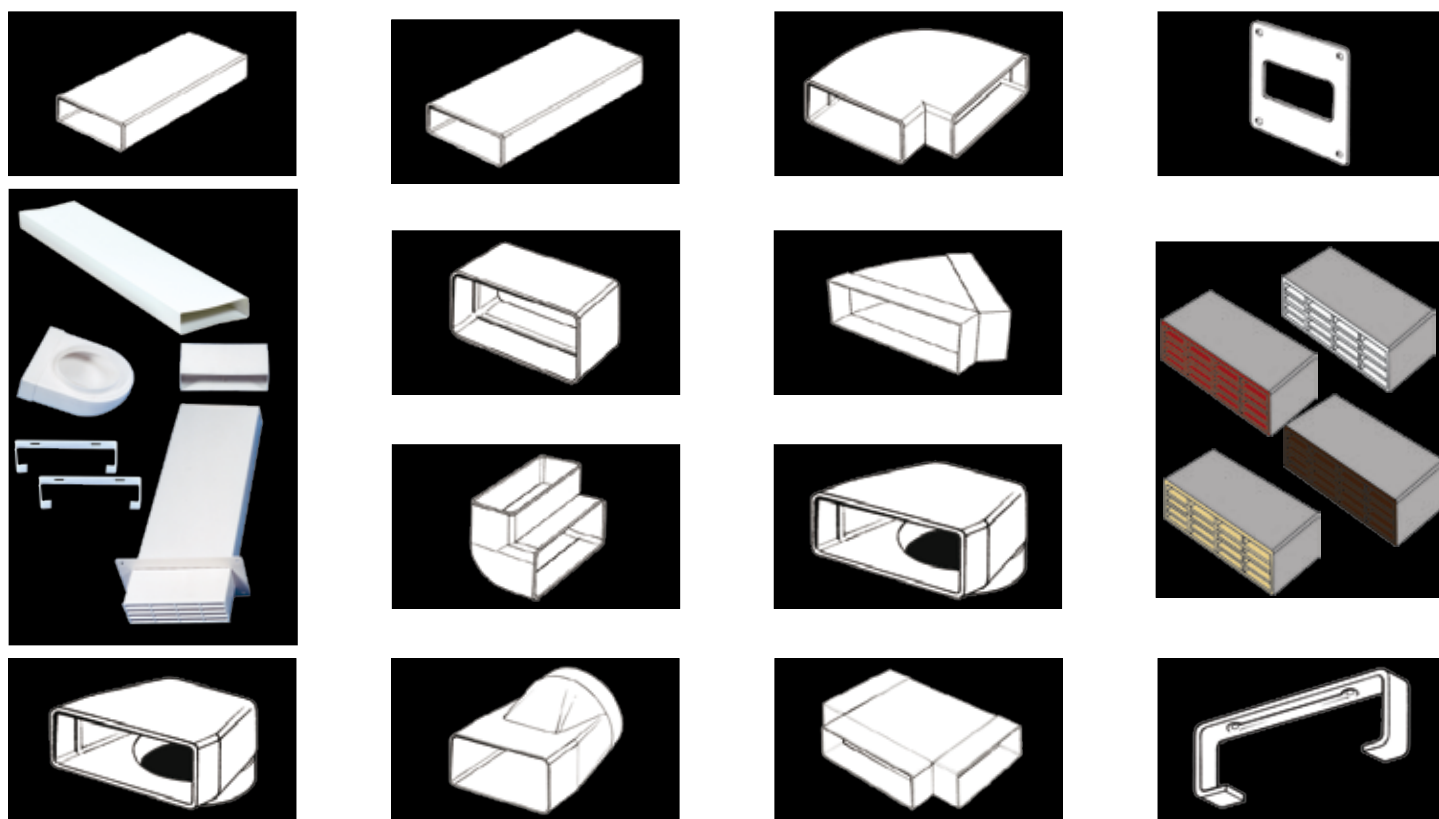

Have you ever wondered where all the excessive cooking by-products like fats, grease and steam go when you are using your rangehood?

Often you may find that your rangehood is being vented into the roof space, where over time this can not only create an invitation for vermin to enter your home to feed on the cooking residues, but also greatly increases the risk and spread of fire within your home.

Elsewhere in the world (and becoming an increasing requirement here in Australia) it is legislated that appliances such as rangehoods be vented outside to protect your greatest assets - your family and your home.

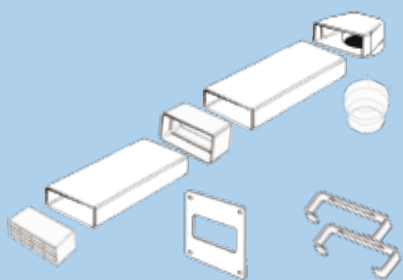

JPM have compiled the low profile Layflat System. Constructed of fire retardant, self-extinguishing, plastic ducting and components, the Layflat system is perfect for rectangular venting installations that have minimal space allowances

The external dimensions of L210mm x W66mm offers greater options to vent in-between floors, wall spaces, or on the top of kitchen cabinets in a smooth, efficient manner that is less conspicuous than other forms of ducting.

LFRHKW

Universal Layflat Venting Kit - Wall

Contents & Features...

- VKC5631W - Airbrick (white)
 - LF20410 - 1.0M Layflat channel (x2)
 - VKC5608 - Channel connector
 - VKC5610 - Channel clip (x2)
 - VKC5601 - Rectangular wall plate
 - VKC5606R - Rotating Elbow Bend 125/150mm
 - AO6007M - 150mm x 700mm Semi-Rigid aluminium ducting
- Overall maximum length of 2000mm
 - Shorten ducting length with sharp hacksaw if required
 - Extend reach with additional channel and channel connectors
- Installation by a professional is recommended
